

WORKPLACE RESOURCE

Future of Work

Distributed ways of working aren't new, but they've been accelerated by the pandemic. People can be productive while working at home, but offices still provide great value as on-demand resources for individuals and teams.

To remain relevant, offices of the future will need to build culture and community, support individual focus, and facilitate intensive teamwork. The work from home experience is different for everyone. Companies should strive to help people stay healthy and productive, no matter where they are working.

Employees who feel empowered with choice and are confident they have flexible tools and resources to meet their needs will have higher level of engagements.

**Lower
Absenteeism**

**Fewer Quality
Defects**

**Higher
Profitability**

Gallup Surveys, January 2020 and April 2017

From Office to Everywhere: Building the Workplace of the Future

The workplace needs to evolve from a singular space into a dynamic network of places from which employees can choose to work.

Distributed workers who can work from home or elsewhere find greater value in the following types of office spaces:

Interactive settings that
facilitate immersive teamwork

Areas that encourage
people to interact with
their extended networks

Reservable on-site workstations
that give people the focus they
can't get at home

Interactive settings that facilitate immersive teamwork

As the workplace landscape continues to evolve, audio-visual technology has become critical in supporting team connectivity. Technology plus interactive settings drive multiple options for engagement.

Areas that encourage people to **interact** with their **extended networks**

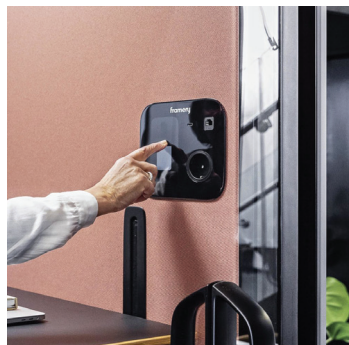

Mobile, reconfigurable, and modular elements can help organizations optimize their real estate by transforming underutilized areas into collaborative spaces to engage with co-workers.

Reservable **on-site work points** that give people the **focus** they can't get at home

Consider ways to integrate room schedulers, reservable Framery One Booths, and space utilization sensors on shared workstations.
